

MY WEBSITE BEEN HACKED!! NOW WHAT?

Email: info@cinricsecurity.com
WebSite: CinricSecurity.com

Cinric Security announces "WordPress Maintenance Service" for all websites that are using WordPress. We cannot call it insurance, but it is the next best thing and then some. You do not have to change your current webhost, you can keep your website hosted where it is and still use our maintenance services. It includes managing, monitoring, securing and backup of your website to the cloud. We used the web industries best practices as the governing principles for all our services.

MANAGE

- We will manage all your updates and keep them current.
- We will manage the general health of your website.
- We will take appropriate action if necessary to protect your website.

MONITOR

- We will monitor your website for malware and required updates.
- We will monitor your website for file changes and notify you if we see anything suspicious.

SECURE

We will secure your website with some of the world best security software. In addition, if your site is compromised, we'll repair it free of charge (a \$300+ value)! Our goal is to secure your website against random bots and malicious hackers.

BACKUP

We will maintain backups of both your database and website files to the cloud. The backing up of your website "offsite" allows us to recover damaged files and even move your site if your hosting account fails.

The cost of this service is just \$325.00 for a year. We use a combination of automated tools and a manual process to review your web site on a continual basis to ensure that WordPress and plugins are up to date at all times. We will also send you a monthly report of all our activities.
